ABSTRACTED-PUB-NO: JP 08196565A

BASIC-ABSTRACT:

Napkin comprises a liq. permeable surface sheet (2), a liq. impermeable back sheet (3), and a liq. absorbing core (4) interposed between the both sheets.
The liq. absorbing core is formed by an upper layer core (20) and a lower layer core (21) for dividing the core in the thickness direction. A

portion of the
upper layer core contacting the buttocks is formed by a front
side core (20A)
and a rear side core (20B) for dividing the upper layer core in
the
longitudinal direction. The rear end of the front side core and
the front end
of the rear side core is sepd. by a predetermined distance, a
portion of the
surface sheet is bent toward the lower layer core at the
separated portions
between the front side and the rear side cores, and faecal matter
holding
pockets (28, 29) are formed by inserting the bent portions of the
surface sheet
between the upper layer core and the lower layer core.

ADVANTAGE - The skin of a wearer is not soiled because faecal
matter is
confined in the faecal matter holding pockets.
